

PREDICTION LIST FROM 2003

Research Subset 1

Does The brains grey / white matter possess an EEG modulated Dipole pattern ?

Re-evaluating Psychometric tests vs Navons. Assessing the Neural correlates of Psychometry

Novel methods for proving the implicit Neuronal topology implied by the recent studies verifying content driven laterized encoding

Neurological map of Convergance / Divergance within opposite brain regions

Comparison of Dipole Pattern. Similarities of Convergance / Divergance

Grey / White matter do opposing charges push and compress grey matter to the skull

Left Brain forms polar opposite ideas centered round terms of reference

Implication of Bilateral structure for the limbic regions

Using WADA as a guide to assessing the Right brain as a Chaotic system. Implications for theories of dependency

Theoretical Subset 1

Universal explanation of personality by Electrochemical Geometry.

Consciousness of the right and left brain as an aspect of Quantum mechanical system

Balanced push/pull processing and perception arises from respectively laterized Neuron structures possessing reversing fractal type patterns

Right Brain Divergance Overrides and dilutes the genetic inheritability value

TWO OTHER SUBSETS DELETED

(Deleted and marked out sections are part of another ongoing research project called “Human systems”)
